

Saturn

Fun fact for kids

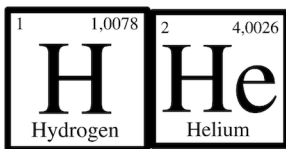

Saturn is the sixth planet from the Sun.

It's the second largest planet in our solar system.

The planet is less dense than water; it would float if placed in a giant bathtub.

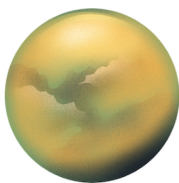

Saturn is mostly made of hydrogen and helium, like Jupiter.

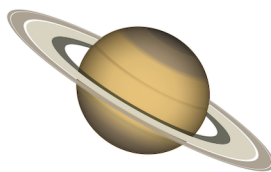

Saturn has at least 83 known moons, including the large moon Titan.

A day on Saturn is only about 10.7 hours long.

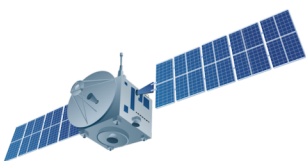

Titan, Saturn's largest moon, is bigger than the planet Mercury.

It's famous for its beautiful ring system.

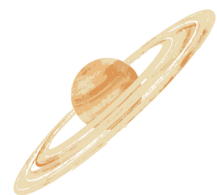

Saturn's rings are made of ice and rock particles.

The Cassini spacecraft studied Saturn for 13 years.

The planet is named after the Roman god of agriculture.

Saturn's rings are divided into seven main groups.
