

SOIL

Fun facts for kids

Soil is essential for plants, offering a place for roots to grow and thrive.

There are more living organisms in a teaspoon of soil than there are people on Earth!

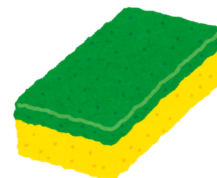

Soil is like magic dirt that helps plants grow.

Soil comes in various colors, like crayons: red, yellow, brown, black, and even purple!

Soil has layers like a cake! The top layer, called "topsoil," is rich in nutrients for plants.

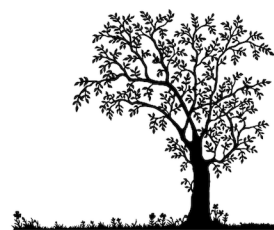

Healthy soil acts like a sponge, soaking up water and helping conserve it.

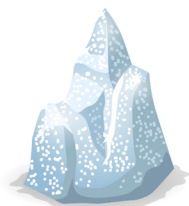

Worms are like nature's gardeners, helping to make the soil nice and healthy for plants.

Bees pollinate flowers, which help them grow and produce seeds that make new plants!

Soil acts as a pot for trees, providing support and nutrients for their roots to grow and absorb water.

People often discover treasures in soil, like minerals or fossils of ancient animals!

Soil scientists study soil by digging, measuring, and sometimes even tasting it.

Beach sand is unique soil, composed of smoothed rocks and shells due to wave action.
